

CP77 - WATER - INDUSTRIAL WATER PRICING POLICY

Policy

The present charge based on the size of the tapping and water allocation remain as is. This cost will now be considered as the service charge.

For water consumption which falls between the standard water allocation and a water quantity defined as up to twice the water allocation, the charge will then become a two part tariff based on the tapping size above, plus a charge for additional water consumed over the allowance. The charge for excess water will be reduced by 10% for industrial users.

For water consumption which falls between twice the standard water allocation and a water quantity defined as up to three times the water allocation, the charge will then become a two part tariff based on the tapping size above, plus a charge for additional water consumed over the allowance. The charge for excess water will be reduced by 15% for industrial users.

For water consumption which falls between three times the standard water allocation and a water quantity defined as up to four times the water allocation, the charge will then become a two part tariff based on the tapping size above, plus a charge for additional water consumed over the allowance. The charge for excess water will be reduced by 20% for industrial users..

For water consumptions greater than those set out above the rate be negotiated.
