

FREE TREE REMOVAL PROGRAM

Clean up your yard and reduce fruit fly activity and infestation.

For a limited time, the GSPFA is offering urban residents free host fruit tree removal from their gardens.

Removal of unwanted or unmanageable fruit trees offers a more permanent solution to the problem as it reduces available protein and shelter sources for fruit fly.

Trees will be cut down at ground level, mulched and taken to landfill.

Removing trees that you no longer want or are unable to manage will mitigate against fruit fly infestations because without host fruits Qff can't fulfill its lifecycle.

To take advantage of this limited offer please contact the GSPFA.

Conditions apply.
